EX:NO:13

IMPLEMENT YOOR OWN PING PROGRAM.

AIM:

Implement a own ping Program using Python.

PROGRAM:

```
import os
import platform
import subprocess
def ping (host = "google.com", count =4):
    Param = "-n" if platform.system().lower() ==
                                    "windows" else "-c"
    command = ["ping", param, str (count), host]
    try:
        output = subprocess.check_output (command,
                                    universal_newlines = True)
        print (output)
    except Exception as e:
        print (f"Ping failed: {e}")
if __name__ == "__main__":
    ping ("8.8.8.8")
```

OUTPUT:

```
Pinging 8.8.8.8 with 32 bytes of data:
Reply from 8.8.8.8: bytes =32 time =6ms TTL =119
Reply from 8.8.8.8: bytes =32 time =9ms TTL =119
Reply from 8.8.8.8: bytes =32 time =5ms TTL =119

Ping statistics for 8.8.8.8:
    Packets: Sent =4, Received =4, Lost =0 (0% Loss),
Approximate round trip times in milli-seconds:
    Minimum =5ms, Maximum =9ms, Average =6ms.
```

RESULT:

Thus a own ping program using Python was implemented.
