EXPERIMEN
TRACER (SIMULATION TOOL)

AIM:

To understand environment of Cisco Packet Tracer to design simple network.

STEPS:

1) From the network component box, click and drag and-drop the bellow components:

a) 4 Generic PCs and one HUB

b) 4 Generic PCs and one Switch.

2) Click on Connections:

a) Click on Copper Straight-Through cable.

b) Select one of the PC and connect it to HUB us the cable. The link LED should glow in green, indica ting tha the link is up. Similarly connect remaining 3 PCs to the HUB

c) Similarly connect 4 PCs to the switch using copper straight-through cable

3) Click on the PCs connected to hub, go to the Des tab, Click on IP Configuration, and enter an IP addr ess an subnet mask. Here, the default gateway and DNS server information is not needed as there are only two end de in the network.

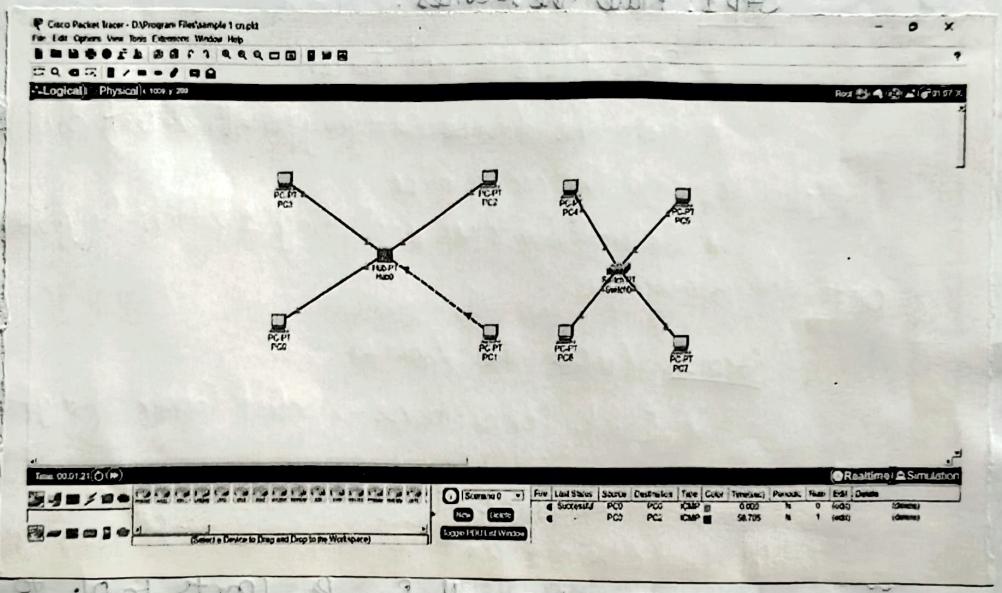

Click on the PDU (message icon) from the common bar.

a) Drag and drop it on one of PC (source machi and then drop it in on another PC (destination machine) Connected to the HUB.

4) Observe the flow of PDU from source Pc to destination Pc by selecting the Realtime mode of simulation

5) Repeat step 3 to Setep 5 for the Pcs connected to the Switch.

6) Observe how HUB and switch are forwarding the PDU and write your observation and conclusion about the behaviour of Switch and HUB.

Result:

Experiment on CISCO PACKET TRANSFER is successfully executed and the output is Verified
